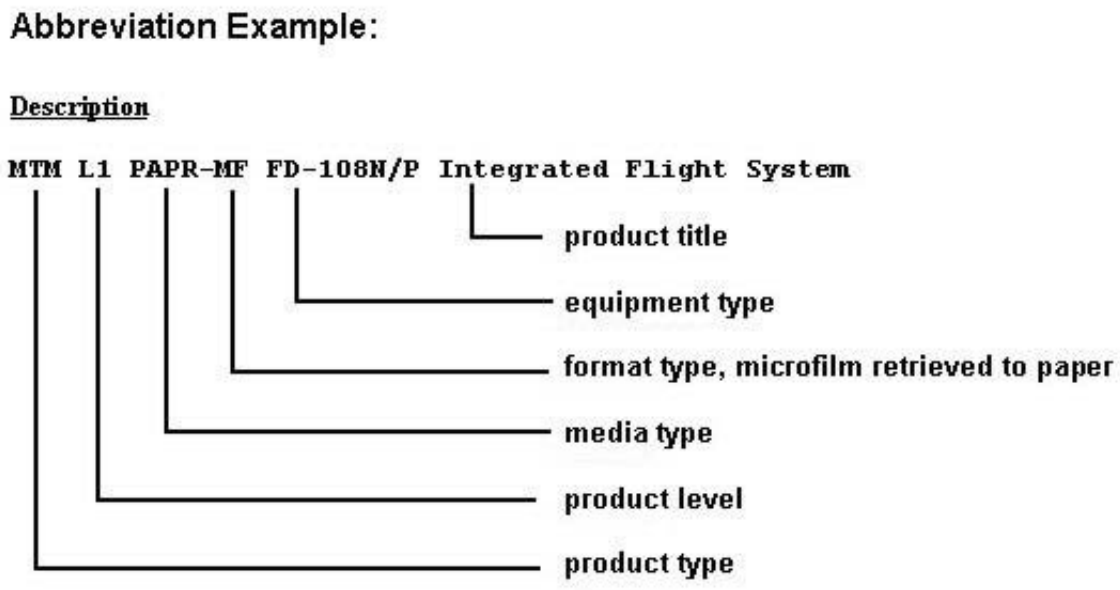
SHIPPING DESCRIPTION

Space limitations (e.g., on purchase order paperwork, shipping papers, etc.) sometimes do not allow for a complete product description. The abbreviated description consists of four abbreviations (product type, product level, media type and format type), the equipment type designation and product title. The abbreviations are described in the Description Key Tables and are used in the More Info page. PAPR-MF means the publication is available only as a photocopied document. Delivery is normally within 14 working days. Abbreviated descriptions are truncated to 40-characters on ship order paperwork.



product type, product level, media type and format type contain the same information found in More Info and are described in the Description Key Tables.

equipment type provides an abbreviated model number for the equipment covered by the product listed.

product title provides the title text from the title page of the product (usually truncated to meet the 40 column limit).

Shipping Paperwork Example (US Version, truncated to 40 characters):

```

LEVELS OF COMPUTER-BASED TRAINING INTERACTIVITY

Level 1

Normally, a lesson of this category/level is provided in a linear format (one idea after another). The user has little or no control over the sequence and timed events of the lesson material. Minimal interactivity is offered through selective screen icons and inserted into the lesson through typical input/output peripherals and programming protocols.

Level 2

A lesson of this category/level allows a student more control over the lesson's scenario through screen icons and other peripherals. Simple emulation or simulations are presented to the user. As an example, a user may be instructed to rotate switches, turn dials, make adjustments or identify and replace a faulted component as part of a procedure.

Level 3

This category/level allows the user an increased level of control over the lesson scenario. Video, graphics or a combination of both is presented to simulate the operation of a system, subsystem or equipment. The lesson scenario training material typically is complex and involves more frequent use of peripherals to affect a transfer of learning. Multiple software branches (two to three levels) and rapid response are provided to support remediation. Emulation and simulation are an integral part of this presentation.

Level 4

This category/level allows the user the highest degree of control over the lesson. Every possible sub-task is analyzed and presented with full, on-screen interaction, similar to the approach used in aircraft simulator technology. The lesson material is extremely complex and involves more frequent use of peripherals to affect the transfer of learning. This category/level normally supports certification, re-certification or qualification requirements. Category/Level 4 involves all the elements of Categories/Levels 1, 2 and 3, plus the following

- High Degree of Interactivity
- Extensive Branching (four or more levels)
- Levels of Sophistication (short of artificial intelligence)
