Government aviation services

Flexible communication capabilities for every mission

Service solutions for government aviation missions have to be as flexible and reliable as the crew and aircraft they support. Rockwell Collins' mission communications, support and connectivity solutions are designed to help rapidly employ airborne assets at a moment's notice and enable aircrew to maintain optimal situational awareness anywhere in the world.

Whether your aircraft needs the capabilities of the world's most robust and trusted voice and data network, vital C4ISR connectivity, or a complete portfolio of flight support services, our solutions are backed by decades of experience supporting government and military aviation, and the expertise of being a premier global provider of both avionics and communications.

Voice and data communications

Rockwell Collins operates the largest aviation network in the world, providing mission-critical voice and data communications over VHF, HF and satcom, and delivering the most extensive and reliable coverage available, even in the most remote locations. We support more than 300 airlines, 15,000 commercial and business aircraft, and thousands of government and military missions a day worldwide.

Key capabilities:

- › Largest aeronautical datalink provider in the world
- › Unmatched air to ground coverage
- › Remote location coverage
- › 99.999% network reliability

Mission support

Rockwell Collins provides the most comprehensive suite of flight support services available today. From takeoff to landing and everything in between, anywhere in the world, we are your single source provider for flight planning, international trip support, cabin connectivity, flight operations management, and mobile applications.

Key capabilities:

- › Desktop and mobile flight planning and operational support services
- › Industry leading iPad® application
- › International Trip Support
- › Flight Operations System (FOS®) – aircraft and crew scheduling, managing aircrew qualification, and training currencies
- › Critical fuel summaries, ETP calculations, ETOPS, and tankering

Mission connectivity

Rockwell Collins connectivity solutions enable the delivery of critical information in real-time, anywhere in the world. For voice, video and data, our satellite communication and next generation connectivity services provide the vital coverage and capabilities your mission needs.

Key capabilities:

- › Full range of SATCOM connectivity options
- › Inmarsat
- › Iridium
- › ViaSat
- › Value-added services
- › 24/7 global technical support

About Rockwell Collins

Rockwell Collins is a pioneer in the development and deployment of innovative communication and aviation electronic solutions for commercial and government applications. Our ARINC information management services offer seamless, secure and reliable solutions to customers in the aviation & airport, rail and critical infrastructure sectors and enables mission-critical data and voice communications and management throughout the world.
