

eXchange™ with service by SKYLink™

High-speed broadband connectivity

Win the information game

There's been a major shift in today's global business environment. The "Golden Rule" – it's no longer whoever has the gold rules it's whoever has the information rules. And although local and international opportunities require you to spend more time away from your office, it is equally critical that no matter where you go, you are never out of reach of game changing information.

The solution is the eXchange™ with service by SKYLink™ from Rockwell Collins. eXchange uses ViaSat's broadband terminal hardware and ARINC's SKYLink data service to deliver satellite-based broadband speeds to your aircraft's cabin. eXchange works with your laptop or Wi-Fi enabled smart phone so you can stay connected to e-mail, the Internet and your company's VPN. With eXchange you may be out of your office, but you are never out-of-touch.

Building trust every day

You are never more than a click away

Investing in a long-range business jet gives you an effective and valuable tool for searching out new opportunities wherever in the world they present themselves. But flying across states, regions, continents and oceans takes time. How much? More than you can afford to be out of touch with our office, home or competitors.

With eXchange in your jet's cabin, travel time is no longer an issue. You now have virtually instant access to the same information you have in your office. E-mail, FoIP, the Internet, VoIP telephony, and corporate Virtual Private Networks (VPN) are all just a click away. eXchange makes all these options easy to access on your laptop or Wi-Fi enabled smartphone.

The best part is all of your data is secure. eXchange uses the latest in data encryption to keep company e-mail accounts and other sensitive company information safe.

How fast is fast?

eXchange is the fastest broadband connection available to business aircraft. In fact, thanks to ARINC's SKYLink satellite network, you are able to access information as fast or faster than you would in your own office. eXchange delivers downloads at up to 3.5 Mbps – that's up to six-times faster than a high-speed cable modem. The upload speed is 128 Kbps in North America, and 256 Kbps in Europe. Plenty fast to keep up with your digital communications needs.

Stay connected here, there – practically everywhere

Rockwell Collins eXchange doesn't only give you the fastest broadband connection available to business aviation it also gives you that connectivity in a rapidly growing number of places around the globe.

Coverage for eXchange using the SKYLink satellite service is available in the areas where you typically travel. North America, Europe, the North Atlantic, Caribbean and parts of Central and South America are currently online and there are more areas being continually added.

When you are flying outside of the SKYLink coverage area, eXchange's AMAR (ARINC Mobile Access Router) provides a seamless transition from ARINC SKYLink's Ku-Band service to ARINC's Inmarsat L-Band service. The soft handoff between satellites ensures that your IP session is maintained and there is no data loss. That's practically global coverage! Of course, to take advantage of this capability, ARINC has to be your service provider for both SKYLink and Inmarsat services.

Create the ultimate link

Like everything in today's rapidly changing business world, no two eXchange aircraft or usage patterns are alike. That's why ARINC offers a variety of SKYLink service plans to ensure that it will meet your individual needs.

eXchange can save you money by offering true broadband connectivity at the lowest price available for high-speed data. Billing is done by User ID and is not aircraft specific. So, billing time for a single aircraft, even with multiple users logging in simultaneously with the same User ID and PIN number, counts only as one person logged on.

Stay connected. Stay informed. Stay one-step ahead

Your world moves fast. And there's only one airborne satellite system that delivers the reliable broadband speeds you need to stay ahead of your global competition – Rockwell Collins eXchange with service by SKYLink.

Global service and support from a trusted source.

Life cycle service solutions you can count on. From initial delivery and throughout your aircraft's life cycle, we are here with comprehensive service and support solutions. Our worldwide support network offers life cycle support solutions from options including performance-based maintenance and repairs, engineered solutions, rental exchange, training and simulation solutions; all backed by the best turnaround times in the industry. Rockwell Collins delivers reliable solutions, anywhere, anytime – every time.

Building trust every day.

Rockwell Collins delivers smart communication and aviation electronic solutions to customers worldwide. Backed by a global network of service and support, we stand committed to putting technology and practical innovation to work for you whenever and wherever you need us. In this way, working together, we build trust. Every day.
