

Full implementation of cybersecurity regulation and inspection assistance.

Installing a cybersecurity system to meet the Nuclear Regulatory Commission (NRC) mandate is a significant investment. You want to make sure the audit has no surprises. Rockwell Collins' consulting services will guide you through the entire compliance process to help you avoid violations and fines.

We've deployed more than 50 cyber solutions in the nuclear industry. No one knows our systems like we do. In fact, our solutions were developed from the ground up to adhere to the NRC regulations.

Our consulting services include pre-inspection support and mock audits, employee role training and role refinement, daily debriefs and continuous feedback throughout the audit. You'll get immediate response papers describing how the controls implemented on your particular component meet the requirement and mitigate the threat vector, as well as post-inspection support, including risk mitigation and remediation activities. With each inspection, we refine our support based on known scrutinies in order to optimize the process.

KEY BENEFITS

- > Expert guidance through the entire audit process
- > Reduce risk of violations and fines
- > Flexible levels of support
- > Mock audits
- > Employee training
- > Risk mitigation

We offer various levels of support throughout the audit process:

- › On site for two weeks
- › On site for one week; back office support for one week
- › Back office support for two weeks

Two dedicated cybersecurity engineers are available by phone when we are not on site.

Building trust every day.

Rockwell Collins delivers innovative aviation and high-integrity solutions that transform commercial and government customers' futures worldwide. Backed by a global network of service and support, we are deeply committed to putting our solutions to work for you, whenever and wherever you need us. In this way, working together, we build trust. Every day.
