| <i>Affected Database Cycle</i>                 | 1308 - TBD*   |
| <i>Affected Airport</i>                        | All RCI AMDBs   |
| <i>Detailed Description</i>                    | <p>The flight display shows parking stand areas that have multiple parking stand locations within them as a single string of text. The labeling for these areas use spaces to separate the parking stand names. For example, a parking stand area that contains parking stand locations for parking stands 1,2 and 3 would appear as 1 2 3 in the flight display. It will appear as 1 2 3 no matter what orientation the plane is relative to the parking stand. This may cause confusion and display what appears as incorrect labeling.</p>  <p>The plane appears to be parked at stand 08 when it is actually parked at stand 06. This is because the string of text is written 06_07_08 and will read as 06 07 08 regardless of the orientation of the plane relative to the parking stand.</p> |
| <i>Pilot Actions</i>                           | Be aware that if a parking stand label appears to be incorrect, it may be due to the plane's orientation relative to the parking stand.   |
| <i>Corrective Action</i>                       | TBD*  |
| <i>Anticipated Correction Cycle</i>            | TBD*  |

\*TBD = To Be Determined
