

Avionics Qualification Policy

2018 Mid-Year Report

Prepared for:
The Aviation Industry
June 30, 2018

2018 Mid-Year AQP Test Results Summary

Phase 3 Tests	Phase 3 Test Waivers	Phase 4 Tests
5	8	0

Tested Results Category*	Number of Tested Suites	Percent
Passed	1	20%
Waived: Non-Network Impacting	1	20%
Waived – Network Impacting	1	20%
Failed	2	40%

*Final AQP Status – In many cases the manufacturer corrected detected issues, some critical, during the course of the AQP test session.

*As of: June 30, 2018

News & Trends in AQP Testing

- AQP Test Procedures and Facilities for AoIP are nearing completion.
- Current AQP Policy: Revision K: May 1, 2017. Revised to add new media....ACARS-Over-IP, Iridium Next/Certus and Swift Broadband Safety.
- For mature, AQP-approved suites, we are frequently able to Waive the AQP testing requirement for minor software updates.
 - Eight such Waivers in 2018 YTD.
- Most avionics suites submitted for AQP support POA, VDL Mode 2 AOA and ATN plus long range media (Aero-Satellite/Iridium/HF).
 - Complete AQP testing is averaging eight days.

News & Trends in AQP Testing

- Due to the maturity of classic VHF based avionics, the number of AQP tests performed during the 1st half of 2018 has declined.
- AQP testing for prototype systems supporting new media did not fair well during AQP and yielded a disproportionate percentage of suites with a status of Failed.
- The development of Iridium Next/Certus Test Facilities and Test Procedures are well underway to support AQP for this media in the near future.
- Since September 2015, all VDLM2 capable avionics systems submitted for AQP must include functionality intended to comply with AEEC Standard 631-6 for Multi-Frequency operation.

AQP Classifications

Pass: Avionics are fully compliant with AEEC standards and have unrestricted network use.

Waived: Avionics have minor deviations from AEEC standards that do not require additional RF resources. Unrestricted use.

Waived/Network-Impacting: Avionics have defects that will require additional RF resources. Unrestricted use; however, RF charges may apply in North America and Europe

Failed: Avionics have serious problems that will impact the network and be disruptive to other airline messages. Restricted from use.

Not Tested: Avionics version has not been submitted for AQP testing. RF utilization charges will apply and possible termination of communications service.

What Yields a “Failed” AQP Status?

Stuck Message

Data link system sends a message in an endless loop jamming up the radio channel regionally for all aircraft and users

Stuck Transmitter/Radio/Carrier

Data link suite keys transceiver continually blocking communications for all other users on the media

Killer Message/Protocol

Data link sends illegal or corrupted message that would cause ARINC data link service component(s) to stop operating (“crash”)

Locking-Up Data Link Requiring Reboot

Data link suite repeatedly enters unrecoverable fault mode (“crashes”) under normal use and ceases sending downlinks and responding to all uplinks. A circuit breaker reset is required to restore ATS and AOC service—generally not allowed in flight

Unstable Data Link System

Data link suite is repeatedly unresponsive to human input or addressed uplink activity making it unsatisfactory from a customer viewpoint. Typically associated with “Locking-Up”
