Cost-effective, system-wide services for NRC-mandated industries.

Keeping a security system up to date and performing optimally is at the top of the priority list for government-mandated critical infrastructure facilities. But it can also consume resources, time and budget, as well as require increasingly complex skill sets to manage in house. Allowing an experienced life cycle management (LCM) provider like Rockwell Collins to take on this responsibility can be the most efficient and reliable way to avoid disruptive events and costly fines.

Our LCM package includes everything from preventative and corrective maintenance for all hardware and software to spare parts management, cyber software patches and vulnerability remediation. Our focus is to help you maintain compliance with NEI 08-09 and other regulatory requirements while achieving a high level of responsiveness, peak operational efficiency and high system availability at all times.

PREVENTIVE MAINTENANCE
Maintenance prior to corrective action being required helps you stay ahead of and possibly avoid problems. We use documented and approved procedures on site and provide detailed reports of completed maintenance, issues noted and corrective actions required, including system wear and tear, patch-related issues and defective product failures.

CORRECTIVE MAINTENANCE
Corrective maintenance covers hardware and software issues for subsystems, including security access control and alarm monitoring multiplexer panels, network switches and routers, security computer equipment and security video head-end equipment.

KEY BENEFITS
- Cost-effective LCM services that mitigate operational disruptions and fines
- Proven critical infrastructure security expertise
- Helps you achieve NEI compliance
- Maintenance for all hardware and software
- ISO-certified spare parts management
- Cyber patching and validation
